

How to Scan Azure DevOps with Flawnter

For more details please visit <https://www.flawnter.com/documentation>

Scanning Azure DevOps repo files

To scan source code files on Azure DevOps, from the menu select "File->Scan Azure DevOps". Then enter the information required. For public repo scanning there is no need for authorization, however there may be limitations on number of files allowed to scan set by Azure DevOps. To make sure there are no limitations you can use your personal access token. You can read more about Azure DevOps access tokens from their documentation page <https://docs.microsoft.com/en-us/azure/devops/organizations/accounts/use-personal-access-tokens-to-authenticate>.

Flawnter Azure DevOps scan example:

The screenshot shows a dialog box titled "Azure DevOps Code Repository Scan" with a close button (X) in the top right corner. The dialog has a green background and contains the following fields:

- API Version *: 6.0 (dropdown menu)
- Base URL *: https://dev.azure.com
- Organization *: cybertest
- Project *: testproj
- Branch *: main
- Auth Token: a754pkq6zkpwRvMJ4viwmeqtv

A "Scan" button is located at the bottom center of the dialog.

API Version: This should be 6 or later version if available.

Base URL: Should be <https://dev.azure.com> as the default Azure DevOps API URL.

Organization: This is the name of your organization in Azure DevOps.

Project: This is the project name of your repo to scan.

Branch: The branch to scan the code. Normally the default branch is either main or master.

Auth Token: This is the personal access token to authenticate to the private repo.
