

# How to Scan GitHub with Flawnter

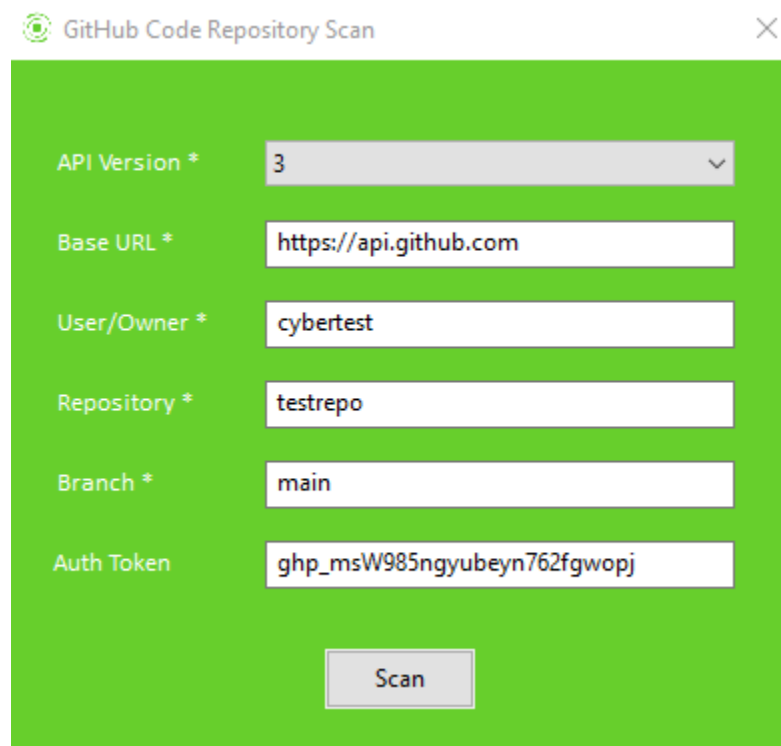

---

For more details please visit <https://www.flawnter.com/documentation>

## Scanning GitHub repo files

To scan source code files on GitHub, from the menu select "File->Scan GitHub". Then enter the information required. For public repo scanning there is no need for authorization, however there may be limitations on number of files allowed to scan set by GitHub. To make sure there are no limitations you can enter your authorization token in the Auth Token section in the format username:password or personal access token. You can read more about GitHub access tokens from their documentation page <https://docs.github.com/en/authentication/keeping-your-account-and-data-secure/creating-a-personal-access-token>.

Flawnter GitHub scan example:

The screenshot shows a dialog box titled "GitHub Code Repository Scan" with a close button (X) in the top right corner. The dialog has a green background and contains the following fields:

- API Version \*: 3 (dropdown menu)
- Base URL \*: `https://api.github.com`
- User/Owner \*: `cybertest`
- Repository \*: `testrepo`
- Branch \*: `main`
- Auth Token: `ghp_msW985ngyubeyn762fgwopj`

A "Scan" button is located at the bottom center of the dialog.

API Version: This should be 3 or later version if available.

Base URL: Should be <https://api.github.com> as the default GitHub API URL.

User/Owner: This is the user or owner of GitHub.

Repository: This is the repo name the code will scan.

Branch: The branch to scan the code. Normally the default branch is either main or master.

Auth Token: This is the personal access token to authenticate to the private repo.
