How to Scan Azure DevOps for Secrets

For more details please visit https://www.flawnter.com/documentation

Scanning Azure DevOps repo files and folders for secrets

Follow the instructions in the document https://www.flawnter.com/download/doc/how-to-scan-azure-devops.pdf. Flawnter Azure DevOps scan not only scans for security and quality flaws but it also looks for hard-coded passwords and secrets in source and other files.

You can extend the secret scanning by adding Flawnter extensions. Here is the link https://www.flawnter.com/download-extensions.

For using your own custom regex rules use Custom Data Finder extension. There is file *named custom-data-finder-rules*. Use this file to put your regex rules. Separate each regex rule by using a new line.
